

Artificial Intelligence Canizaro Library Pathfinder

“Our personal life has greater value than any algorithm, and social relationships require spaces for development that far transcend the limited patterns that any soulless machine can pre-package. Let us not forget that, while able to store millions of data points and answer many questions in a matter of seconds, artificial intelligence remains equipped with a “static memory” that is in no way comparable to that of human beings.” – *Pope Leo XIV*

Please be aware of the risks and consequences when using AI tools!

- Check with each course instructor to confirm any AI-related permissible uses and/or restrictions- all AI usage is subject to the AMU Academic Honor Code
- **DO NOT under any circumstance upload sensitive, confidential, or proprietary information to AI tools**

- Be sensitive to potential copyright infringement- many publishers/journals/authors prohibit the uploading of articles or their writing to LLMs
- All references obtained through an LLM must be cross-verified and properly cited- including the AI tools themselves (refer to APA, MLA & Chicago Style Manuals)

“The degree of civilization attained in our world and the goals you are charged to achieve are now facing a major challenge in the form of artificial intelligence. This is a development that will certainly be of great help to society, provided that its employment does not undermine the identity and dignity of the human person and his or her fundamental freedoms.” – *Pope Francis*
